# 13<sup>th</sup> German-Japanese Economic Forum AI in industrial production – the self-learning factory of the future

Wednesday, 3<sup>rd</sup> April 2019

Hannover Fairgrounds ■ 30521 Hannover - Germany

## General information

In the future, artificial intelligence is going to have a decisive impact on numerous areas of society and the economy. Self-learning and intelligent systems will be increasingly employed in production processes. Machines will autonomously report incorrect settings, while production units will recognize data stream structures, learn from them and independently reprogram themselves. The factories of the future will be able to adapt to changing requirements on their own.

At the 13<sup>th</sup> German-Japanese Business Forum, experts from industry, science and government will discuss potential AI applications for industrial processes.

*For the first time, the forum will also feature a startup event, at which German and Japanese startups will present their innovations in short pitches.*

To kick things off, Deutsche Messe will offer interested participants a tour of interesting innovations in connection with the “AI in production” focus.

The traditional get-together will take place at the end of the forum.

**Call for paper startup pitch:  
For German & Japanese startups only**

**free of charge!**

This is your chance to get your ideas and suggestions included in the startup session at the German-Japanese Economic Forum on Wednesday, 3<sup>rd</sup> April 2019. Presentations (focus on AI and Robotics) can be delivered in English or German. The presentation language is German or Japanese. All submitters will be notified by **11 January 2019** as to whether their proposals have been accepted.

Deadline to submit your proposal: **13 November 2018**

Please follow the link to submit your presentation:
